

Full-stack engineer with 15+ years of experience building software in complex, real-world domains. I'm most comfortable working across systems end-to-end; from shaping product ideas to implementing and evolving them in production, often in fuzzy or poorly defined problem spaces. I contribute to architectural decisions, mentor teammates, and help teams navigate difficult technical problems, while staying pragmatic and open to other perspectives.

End-to-end ownership across frontend and backend

Building and evolving systems in complex environments

Navigating ambiguity and shaping workable solutions

Designing systems under real-world constraints

Mentoring engineers and contributing to architectural direction

☆ Speaker at FrontKon 2024 (biggest Czech frontend conference)

☆ Nx Certified Expert

SELECTED IMPACT

Shaped the frontend platform of an industrial plant control system as the primary senior frontend engineer for several years, building and evolving a complex ecosystem of Angular packages used to compose and operate real-world plant configurations, and contributing to architectural decisions including company-wide initiatives such as a shared component library and frontend standards.

Brought in as the first engineer to kick off a spatial computing project for a San Francisco-based startup; built the initial system from scratch using Babylon.js and React, including custom architecture (e.g. integrating RxJS for time-based data and visualization), and later handed off the project to a full-time engineer after establishing a solid foundation.

Helped drive a long-running modernization effort for a New York-based financial education company; evolved a legacy Yii2 backend into a Next.js frontend with an API layer, working across complex integrations (custom e-commerce, third-party learning platform, multiple SSO providers); stepped up to handle client communication, architecture, and team coordination during a critical phase.

WORK EXPERIENCE

08 / 2022 - Present

Senior Software Engineer

@ This Dot Labs

Worked across multiple client projects in a fast-paced consultancy environment, focusing on complex frontend and full-stack systems, often involving exploratory work including AST-based tooling, interactive demos, and rapid prototyping in new technologies.

Took ownership of features and systems end-to-end, often in unfamiliar domains or partially defined problem spaces and contributed to architectural decisions, especially in situations involving legacy systems, external integrations, or non-trivial data flows.

Worked directly with clients to clarify requirements, challenge assumptions, and align technical decisions with real-world constraints.

Stepped in where needed to unblock teams - from resolving technical issues to helping coordinate work or fill gaps in communication.

06 / 2017 - 10 / 2022

Senior Software Engineer

@ **Bühler Group**

Worked on the core frontend platform of an industrial plant control system, building and evolving a complex ecosystem of Angular packages used by engineers to compose and operate real-world plant configurations across multiple deployments.

Served as the primary senior frontend engineer for several years, contributing to architectural decisions and helping guide the platform's evolution, including company-wide initiatives such as a shared component library.

Supported engineers building on top of the platform by resolving issues, improving consistency, and translating complex domain requirements into usable and reliable interfaces.

05 / 2015 - 05 / 2017

Software Engineer & Technical Consultant

@ **Quanti**

Worked across multiple bespoke software projects, contributing to both implementation and early-stage design, including frontend development, API design, and system modeling.

Collaborated directly with clients to gather requirements, translate them into technical specifications (including diagrams and API designs), and shape solutions from initial concepts through delivery.

Took on a range of responsibilities across projects - from frontend engineering and UX wireframing to project coordination - developing a strong foundation in bridging business needs and technical implementation.

01 / 2014 - Present

Co-founder & Technical Lead

@ **7divs**

Co-created a lightweight CMS platform focused on simplicity and standardized frontend structure for small business websites.

Designed and implemented the system end-to-end, including content management, frontend architecture, and configuration-driven customization.

Maintained and evolved the product over time, balancing usability, flexibility, and low maintenance overhead.

09 / 2014 - 04 / 2015

Frontend Engineer

@ **E-commerce Holding**

Worked on customer-facing e-commerce platforms within a large, VC-backed group, contributing to frontend development and user experience improvements.

Developed and maintained frontend features across evolving backend systems (from .NET to PHP-based platforms).

Collaborated with designers and product teams to improve usability and consistency across key user flows.

01 / 2013 - 09 / 2014

Creative Coder

@ **Bistro Agency**

Developed interactive, animation-heavy landing pages for marketing campaigns for clients such as Vodafone and McCann Erickson.

Focused on building polished user experiences and frontend interactions, often working closely with art directors in a fast-paced agency environment.

Contributed to early e-commerce-related projects, which led to a transition into product-focused development.

09 / 2012 - 12 / 2012

Front-end Developer

@ **LOGICA (now part of CGI)**

Joined a challenging enterprise project as the sole frontend engineer, working within a .NET-based system.

Delivered frontend solutions under strict constraints, including Bootstrap-based UI and legacy browser support (e.g. IE6).

06 / 2012 - 12 / 2012

Front-end & PHP Developer & Art Director

@ **Zen Systems**

Worked across a range of small projects, contributing to frontend development, PHP backend work, and UI/design tasks.

Delivered end-to-end features in a generalist role, combining implementation with basic visual and interaction design.

10 / 2011 - 06 / 2012

Front-end Developer & Graphic Designer

@ **Develion Art**

Started as a graphic designer and moved into frontend development, working across both design and implementation.

Contributed to internal and client projects, combining UI design with frontend development.

Developed early experience bridging design and engineering.

10 / 2007 - Present

Freelance Software Engineer

@ **jankaiser.cz**

Delivered websites and small applications for clients end-to-end, covering both frontend implementation and visual design.

Built early experience working directly with clients, shaping requirements, and taking full ownership of projects.

EXAMS AND EDUCATION

2022 - Present

Biomedical Informatics (PhD)

@ **1st Faculty of Medicine, Charles University**

Intersection of LLMs, agentic workflows, and clinical data systems

2018 - 2020

Cognitive Informatics (Master's degree)

@ **University of Economics, Prague**

summa cum laude

top of class

2013 - 2018

Applied Informatics (Bachelor's degree)

@ **University of Economics, Prague**

TECHNICAL CAPABILITIES & LANGUAGES

LANGUAGES

Czech (Native), English (Fluent - TOEFL 115/120), French (Fluent)

EMERGING TECH

LLMs, AI Integrations, Agentic Workflows, AI Assisted Development

CORE & FRAMEWORKS

TypeScript, JavaScript, React, Next.js, Angular, Vue, Astro

BACKEND & CLOUD

Node.js, NestJS, Python, PHP, AWS, Vercel, CI/CD, Docker, SQL / NoSQL

DESIGN & LEADERSHIP

Technical Mentorship, Roadmapping, Cross-functional Communication, UX/UI, Figma
